Canada’s first master’s program in computational science takes an interdisciplinary approach to this exciting and dynamic area of study. The M.Sc. in computational science is offered in both thesis and Non-thesis programs, both with a co-operative education option.

You’ll study at Memorial, Atlantic Canada’s largest university. Memorial has a well-deserved reputation for excellent computing facilities and innovative research. And we’re in Newfoundland, known worldwide for its peerless recreational and cultural activities.

For complete program information, see our web site: www.mun.ca/science/CMSC
