

Part of the evaluation for your course this semester will be problem sets that you will complete on WeBWorK, an online homework system. These problem sets give you instant feedback to help you master topics as you learn them and identify problem areas where you may want to ask for extra help from your instructor or the Math Help Centre.

You can access WeBWorK for your course at

<https://math.citl.mun.ca/webwork2/Math1001-20240241542/>

Try logging in now, and work through the problem set called “GettingStarted” so that you know how to answer different types of problems.

If you can’t access the course or need technical help at any time during the semester, you can email Beth Ann Austin at eaustin@mun.ca. Please include your name and your class (Math 1001-081) in your email!

How to use WeBWorK

For more information on how to use WebWorK, watch the video at <http://bit.ly/webworkintro>

Pay close attention to the information on the right side of the page when you click into each problem set. This will tell you when the problem set is due, and what your target mark for the set is. **You must reach the target mark in order to get credit for the problem set** – but don’t worry, you can try each question as many times as you need to! Once you reach the target mark, you will receive full credit for the set.
